

## Security Assessment: Nomoex Token TOKEN

July 11, 2024

- Audit Status: **Pass**
- Audit Edition: **Advance**

# Risk Analysis

## Classifications of Manual Risk Results

Classification	Description
 Critical	Danger or Potential Problems.
 High	Be Careful or Fail test.
 Medium	Pass, Not-Detected or Safe Item.
 Low	Function Detected

## Manual Code Review Risk Results

Contract Privilege	Description
 Buy Tax	0%
 Sale Tax	0%
 Cannot Buy	Pass
 Cannot Sale	Pass
 Max Tax	0%
 Modify Tax	No
 Fee Check	Pass
 Is Honeypot?	Not Detected
 Trading Cooldown	Not Detected
 Can Pause Trade?	Pass
 Pause Transfer?	Not-Detected
 Max Tx?	Pass
 Is Anti Whale?	Not-Detected
 Is Anti Bot?	Not-Detected

Contract Privilege	Description
 Is Blacklist?	Not-Detected
 Blacklist Check	Pass
 is Whitelist?	Not-Detected
 Can Mint?	Fail
 Is Proxy?	Not Detected
 Can Take Ownership?	Not Detected
 Hidden Owner?	Not-Detected
 Owner	0x7820D9dca8F7F7A1E3380986a06e6C35D79919B
 Self Destruct?	Not Detected
 External Call?	Not-Detected
 Other?	Not Detected
 Holders	1,742
 Auditor Confidence	Medium
 KYC Present	Yes
 KYC URL	<a href="https://assuredefi.com/projects/nomoex">https://assuredefi.com/projects/nomoex</a>

The following quick summary it's added to the project overview; however, there are more details about the audit and its results. Please read every detail.

# Project Overview

## Token Summary

Parameter	Result
Address	0x30683d46edD7E2A52402e5301B14dB33BD4Ff550
Name	Nomoex Token
Token Tracker	Nomoex Token (NOMOX)
Decimals	8
Supply	2,500,000,000
Platform	BNBCHAIN
compiler	v0.5.16+commit.9c3226ce
Contract Name	BEP20Token
Optimization	Yes with 200 runs
LicenseType	MIT
Language	Solidity
Codebase	<a href="https://bscscan.com/address/0x30683d46edD7E2A52402e5301B14dB33BD4Ff550#code">https://bscscan.com/address/0x30683d46edD7E2A52402e5301B14dB33BD4Ff550#code</a>
Payment Tx	Corporate

## Main Contract Assessed Contract Name

Name	Contract	Live
Nomoex Token	0x30683d46edD7E2A52402e5301B14dB33BD4Ff550	Yes

## TestNet Contract Assessed Contract Name

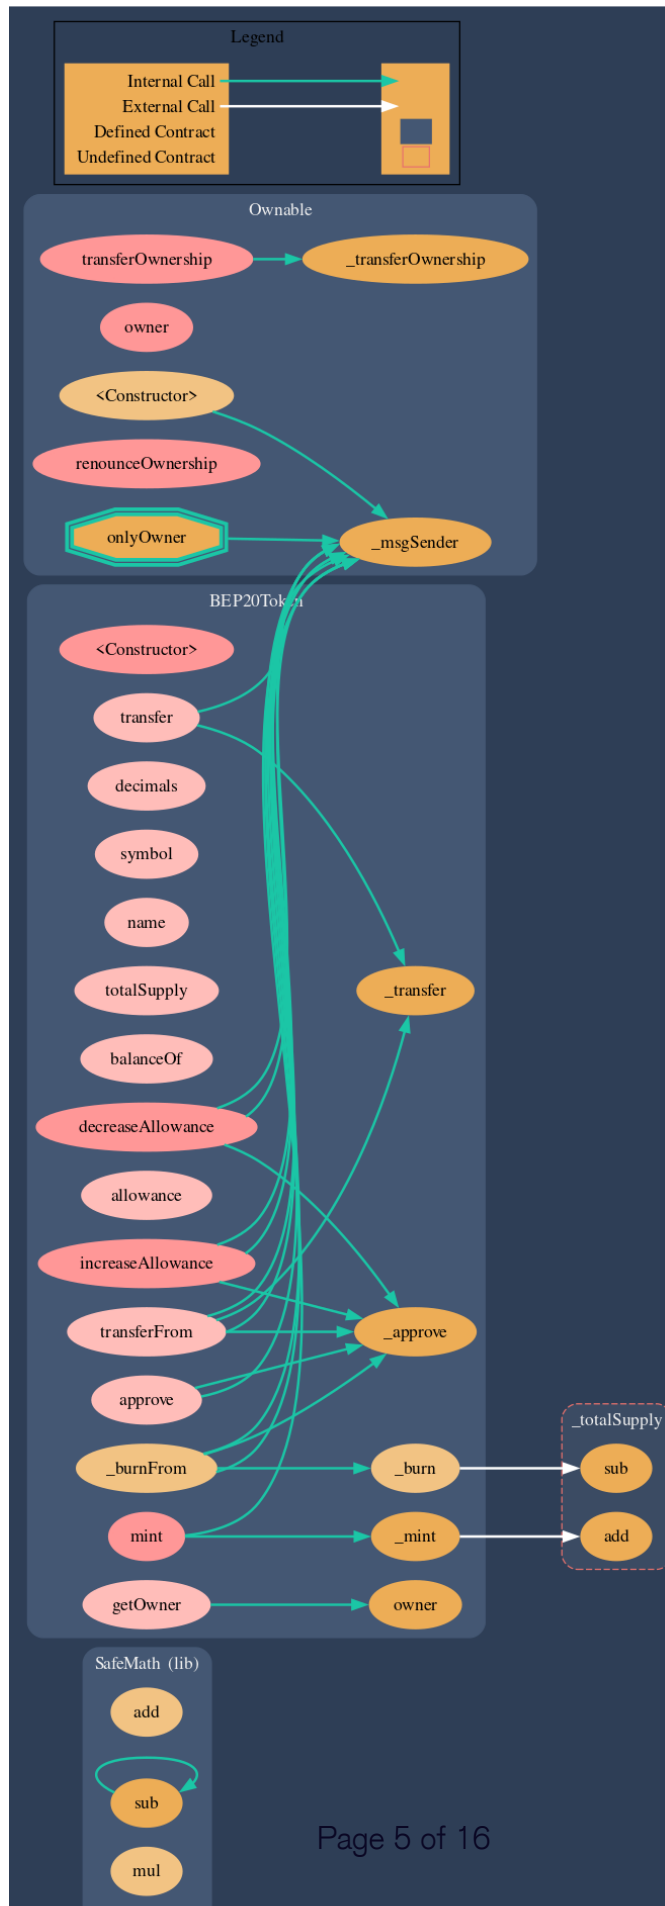

Name	Contract	Live
Nomoex Token	0xE44d49E61BA9Ee132BdB4035145Bc18cE2FE19f3	Yes

## Solidity Code Provided

SolidID	File Sha-1	FileName
BEP20Token	230455e4f727600969683dd9e7550e0a2327b8ae	BEP20Token.sol
BEP20Token		.sol
BEP20Token		.sol
BEP20Token		.sol
BEP20Token		.sol
BEP20Token		.sol

# Call Graph

The contract for Nomoex Token has the following call graph structure.

# Inheritance

The contract for Nomoex Token has the following inheritance structure.

The Project has a Total Supply of 2,500,000,000

## NOMOX-03 | Lack of Input Validation.

Category	Severity	Location	Status
Volatile Code	 Low	BEP20Token.sol: L: 322 C: 12, L: 331 C: 12, L: 503 C: 12	 Not-Detected

---

### Description

The given input is missing the check for the non-zero address.

The given input is missing the check for the onlyOwners need to be revisited for require..

### Remediation

We advise the client to add the check for the passed-in values to prevent unexpected errors as below:

```
...
require(receiver != address(0), "Receiver is the zero address");
...
...
require(value X limitation, "Your not able to do this function");
...
```

We also recommend customer to review the following function that is missing a required validation. onlyOwners need to be revisited for require..

## NOMOX-05 | Missing Event Emission.

Category	Severity	Location	Status
Volatile Code	 Low	BEP20Token.sol: L: 331 C: 12, L: 503 C: 12	 Not-Detected

### Description

Detected missing events for critical arithmetic parameters. There are functions that have no event emitted, so it is difficult to track off-chain changes. The linked code does not create an event for the transfer.

### Remediation

Emit an event for critical parameter changes. It is recommended emitting events for the sensitive functions that are controlled by centralization roles.

## NOMOX-14 | Unnecessary Use Of SafeMath

Category	Severity	Location	Status
Logical Issue	 Medium	BEP20Token.sol: L: 0 C: 0	 Detected

### Description

The SafeMath library is used unnecessarily. With Solidity compiler versions 0.8.0 or newer, arithmetic operations

will automatically revert in case of integer overflow or underflow.

library SafeMath {

An implementation of SafeMath library is found.

using SafeMath for uint256;

SafeMath library is used for uint256 type in contract.

### Remediation

We advise removing the usage of SafeMath library and using the built-in arithmetic operations provided by the

Solidity programming language

### Project Action

# Technical Findings Summary

## Classification of Risk

Severity	Description
 Critical	Risks are those that impact the safe functioning of a platform and must be addressed before launch. Users should not invest in any project with outstanding critical risks.
 High	Risks can include centralization issues and logical errors. Under specific circumstances, these major risks can lead to loss of funds and/or control of the project.
 Medium	Risks may not pose a direct risk to users' funds, but they can affect the overall functioning of a platform
 Low	Risks can be any of the above but on a smaller scale. They generally do not compromise the overall integrity of the Project, but they may be less efficient than other solutions.
 Informational	Errors are often recommended to improve the code's style or certain operations to fall within industry best practices. They usually do not affect the overall functioning of the code.

## Findings

Severity	Found	Pending	Resolved
 Critical	0	0	0
 High	0	0	0
 Medium	1	1	0
 Low	2	2	0
 Informational	0	0	0
Total	3	3	0

# Social Media Checks

Social Media	URL	Result
Twitter	<a href="https://x.com/nomoex_global">https://x.com/nomoex_global</a>	Pass
Other		N/A
Website	<a href="https://nomoex.com">https://nomoex.com</a>	Pass
Telegram	<a href="https://t.me/nomoexcommunity">https://t.me/nomoexcommunity</a>	Pass

We recommend to have 3 or more social media sources including a completed working websites.

**Social Media Information Notes:**

**Auditor Notes:** undefined

**Project Owner Notes:**

# Assessment Results

## Score Results

Review	Score
Overall Score	91/100
Auditor Score	83/100
Review by Section	Score
Manual Scan Score	23
Auto Scan Score	37
Advance Check Score	31

The Following Score System Has been Added to this page to help understand the value of the audit, the maximum score is 100, however to attain that value the project must pass and provide all the data needed for the assessment. Our Passing Score has been changed to 84 Points for a higher standard, if a project does not attain 85% is an automatic failure. Read our notes and final assessment below.

## Audit Passed

# Assessment Results

## Important Notes:

- SafeMath Usage: Proper usage of SafeMath for arithmetic operations to prevent overflows.␣
- Ownership: Ownable contract ensures only the owner can mint tokens and transfer ownership. renounceOwnership can leave the contract without an owner, which may be risky.␣
- Zero Address Checks: Functions like \_transfer, \_mint, \_burn, \_approve check for zero address to prevent errors.␣
- Standard Compliance: Implements standard BEP20 functions and events. Includes additional functions for allowance management (increaseAllowance, decreaseAllowance).␣
- Minting: Only the owner can mint new tokens, increasing total supply.␣
- Burning: \_burn and \_burnFrom allow token destruction, reducing total supply. ␣
- Gas Usage: No evident gas optimization issues. Functions are straightforward and follow best practices.␣
- Approval Race Condition: Standard BEP20 issue where changing allowance can lead to race conditions. Mitigated by increaseAllowance and decreaseAllowance.␣
- Renounce Ownership: Calling renounceOwnership will leave the contract without an owner, disabling minting and other owner-only functions.

**Auditor Score =83**  
**Audit Passed**

# Appendix

## Finding Categories

### Centralization / Privilege

Centralization / Privilege findings refer to either feature logic or implementation of components that act against the nature of decentralization, such as explicit ownership or specialized access roles in combination with a mechanism to relocate funds.

### Gas Optimization

Gas Optimization findings do not affect the functionality of the code but generate different, more optimal EVM opcodes resulting in a reduction on the total gas cost of a transaction.

### Logical Issue

Logical Issue findings detail a fault in the logic of the linked code, such as an incorrect notion on how `block.timestamp` works.

### Control Flow

Control Flow findings concern the access control imposed on functions, such as owner-only functions being invoke-able by anyone under certain circumstances.

### Volatile Code

Volatile Code findings refer to segments of code that behave unexpectedly on certain edge cases that may result in a vulnerability.

### Coding Style

Coding Style findings usually do not affect the generated byte-code but rather comment on how to make the codebase more legible and, as a result, easily maintainable.

### Inconsistency

Inconsistency findings refer to functions that should seemingly behave similarly yet contain different code, such as a constructor assignment imposing different requirements on the input variables than a setter function.

### Coding Best Practices

ERC 20 Coding Standards are a set of rules that each developer should follow to ensure the code meets a set of criteria and is readable by all the developers.

# Disclaimer

Assure Defi has conducted an independent security assessment to verify the integrity of and highlight any vulnerabilities or errors, intentional or unintentional, that may be present in the reviewed code for the scope of this assessment. This report does not constitute agreement, acceptance, or advocacy for the Project, and users relying on this report should not consider this as having any merit for financial advice in any shape, form, or nature. The contracts audited do not account for any economic developments that the Project in question may pursue, and the veracity of the findings thus presented in this report relate solely to the proficiency, competence, aptitude, and discretion of our independent auditors, who make no guarantees nor assurance that the contracts are entirely free of exploits, bugs, vulnerabilities or deprecation of technologies.

All information provided in this report does not constitute financial or investment advice, nor should it be used to signal that any persons reading this report should invest their funds without sufficient individual due diligence, regardless of the findings presented. Information is provided 'as is, and Assure Defi is under no covenant to audited completeness, accuracy, or solidity of the contracts. In no event will Assure Defi or its partners, employees, agents, or parties related to the provision of this audit report be liable to any parties for, or lack thereof, decisions or actions with regards to the information provided in this audit report.

The assessment services provided by Assure Defi are subject to dependencies and are under continuing development. You agree that your access or use, including but not limited to any services, reports, and materials, will be at your sole risk on an as-is, where-is, and as-available basis. Cryptographic tokens are emergent technologies with high levels of technical risk and uncertainty. The assessment reports could include false positives, negatives, and unpredictable results. The services may access, and depend upon, multiple layers of third parties.
