THE VERIFICATION **GOLD STANDARD**

Security Assessment

Norexa

Date: 19/07/2025

Audit Status: FAIL

Audit Edition: Advanced+

Risk Analysis

Vulnerability summary

Classification	Description
 High	High-level vulnerabilities can result in the loss of assets or manipulation of data.
 Medium	Medium-level vulnerabilities can be challenging to exploit, but they still have a considerable impact on smart contract execution, such as allowing public access to critical functions.
 Low	Low-level vulnerabilities are primarily associated with outdated or unused code snippets that generally do not significantly impact execution, sometimes they can be ignored.
 Informational	Informational vulnerabilities, code style violations, and informational statements do not affect smart contract execution and can typically be disregarded.

Executive Summary

According to the Assure assessment, the Customer's smart contract is **Poorly Secured**.

Scope

Target Code And Revision

For this audit, we performed research, investigation, and review of the Norexa contracts followed by issue reporting, along with mitigation and remediation instructions outlined in this report.

Target Code And Revision

Project	Assure
Language	Solidity
Codebase	https://etherscan.io/address/0xdE860ac02D0F22363da499577CA7894afD8C98b4#readContract
Audit Methodology	Static, Manual

Attacks made to the contract

In order to check for the security of the contract, we tested several attacks in order to make sure that the contract is secure and follows best practices.

Category	Item
Code review & Functional Review	<ul style="list-style-type: none">• Compiler warnings.• Race conditions and Reentrancy. Cross-function race conditions.• Possible delays in data delivery.• Oracle calls.• Front running.• Timestamp dependence.• Integer Overflow and Underflow.• DoS with Revert.• DoS with block gas limit.• Methods execution permissions.• Economy model.• Private user data leaks.• Malicious Event log.• Scoping and Declarations.• Uninitialized storage pointers.• Arithmetic accuracy.• Design Logic.• Cross-function race conditions.• Safe Zeppelin module.• Fallback function security.• Overpowered functions / Owner privileges

AUDIT OVERVIEW

1. Privilege & Denial-of-Service via updateSwapThreshold

Issue:

```
function updateSwapThreshold(uint256 newAmount) public {
    require(msg.sender == TreasuryAddress, "only TreasuryAddress can change swapThreshold");
    swapTokensAtAmount = newAmount * 1e18;
}
```

Because only TreasuryAddress can call this, but Owner can call setTreasuryAddress() to point TreasuryAddress at themselves or any malicious EOA/contract, the owner effectively regains control over swapTokensAtAmount. By setting swapTokensAtAmount = 0, every transfer where swapEnabled == true and the contract holds any tokens will trigger swapBack(). If the pool has zero reserves or the router misbehaves, every transfer will revert, locking trading (DoS). Conversely, setting it extremely high can prevent all auto-swaps, starving the treasury of fees.

Recommendation: Restrict updateSwapThreshold to onlyOwner or renounce ownership.

Enforce a sensible minimum (for example

require(newAmount >= 1, "threshold too low"); and require(newAmount <= totalSupply()/100, "threshold too high");).

Emit an event SwapThresholdUpdated(uint256 old, uint256 neu) for transparency.

2. Token Rescue Function Drains Native Tokens

Issue:

```
function transferForeignToken(address _token, address _to) public returns (bool) {
    require(msg.sender == TreasuryAddress, "only TreasuryAddress can withdraw");
    uint256 _contractBalance = IERC20(_token).balanceOf(address(this));
    return IERC20(_token).transfer(_to, _contractBalance);
}
```

There is no check preventing _token == address(this). A malicious or compromised TreasuryAddress can call: transferForeignToken(address(this), treasury);

and immediately withdraw all NRX tokens that have been accumulated in the contract—completely bypassing the normal swap-and-send process.

Recommendation: Add require(_token != address(this), "Cannot withdraw native tokens");

If rescuing is desired, split into two functions: one for foreign tokens, one for native (with distinct access control and events). Another option is to renounce ownership.

No medium issues were found.

No low issues were found.

1. Broken Anti-Bot / Fee-Bypass in “Dead Blocks” Logic [Already deployed N/A]

Issue: The contract declares a deadBlocks parameter and a penaltyAmount variable intended to punish bot trades in the first few blocks after trading is enabled but never actually uses them. Instead, fee-taking only occurs when

```
if (takeFee && tradingActiveBlock > 0 && (block.number > tradingActiveBlock))
```

Because `block.number > tradingActiveBlock` is false in the very first block (where `block.number == tradingActiveBlock`), all trades in that block incur zero fees. Bots can:

Wait for `enableTrading()` to be called.

In that same block, submit a swap on Uniswap, paying 0% fees, sniping pre-launch liquidity.

This completely defeats the intended anti-sniping mechanism and allows arbitrage/sniping with no penalty.

Recommendation: Change the fee-condition to `block.number >= tradingActiveBlock + deadBlocks`.

Compute a dynamic `penaltyAmount = amount * penaltyRate / 100` for `block.number < tradingActiveBlock + deadBlocks`.

Fully remove the unused `penaltyAmount` placeholder and wire in the above logic so that the first N blocks incur a high punitive tax (for example 99%) and only then settle to the normal `buyFee/sellFee`.

2. Dead code

Issue: Unused `deadblocks` in `enableTrading()` and unused `penaltyAmount` in `_transfer()`

Recommendation: Implement the logic or delete the variable/parameter declarations.

Testing coverage

During the testing phase, custom use cases were written to cover all the logic of contracts. **Check "Annexes" to see the testing code.*

Assessment Results

Score Results

Review	Score
Global Score	75/100
Assure KYC	Not completed
Audit Score	75/100

The Following Score System Has been Added to this page to help understand the value of the audit, the maximum score is 100, however to attain that value the project must pass and provide all the data needed for the assessment. Our Passing Score has been changed to 84 Points for a higher standard, if a project does not attain 85% is an automatic failure. Read our notes and final assessment below. The Global Score is a combination of the evaluations obtained between having or not having KYC and the type of contract audited together with its manual audit.

Audit FAIL

Following our comprehensive security audit of the token contract for the Norexa project, the project did not fulfill the necessary criteria required to pass the security audit.

Disclaimer

Assure Defi has conducted an independent security assessment to verify the integrity of and highlight any vulnerabilities or errors, intentional or unintentional, that may be present in the reviewed code for the scope of this assessment. This report does not constitute agreement, acceptance, or advocating for the Project, and users relying on this report should not consider this as having any merit for financial Norexa in any shape, form, or nature. The contracts audited do not account for any economic developments that the Project in question may pursue, and the veracity of the findings thus presented in this report relate solely to the proficiency, competence, aptitude, and discretion of our independent auditors, who make no guarantees nor assurance that the contracts are entirely free of exploits, bugs, vulnerabilities or deprecation of technologies.

All information provided in this report does not constitute financial or investment Norexa, nor should it be used to signal that any person reading this report should invest their funds without sufficient individual due diligence, regardless of the findings presented. Information is provided 'as is, and Assure Defi is under no covenant to audit completeness, accuracy, or solidity of the contracts. In no event will Assure Defi or its partners, employees, agents, or parties related to the provision of this audit report be liable to any parties for, or lack thereof, decisions or actions with regards to the information provided in this audit report.

The assessment Norexas provided by Assure Defi are subject to dependencies and are under continuing development. You agree that your access or use, including but not limited to any Norexa reports, and materials, will be at your sole risk on an as-is, where-is, and as-available basis. Cryptographic tokens are emergent technologies with high levels of technical risk and uncertainty. The assessment reports could include false positives, negatives, and unpredictable results. The Norexa may access, and depend upon, multiple layers of third parties.
