

# Security Assessment: TG.Bet Token

January 11, 2024

TG.Bet

• Audit Status: Fail

Audit Edition: Advance

# **Risk Analysis**

## **Classifications of Manual Risk Results**

Classification	Description		
Critical	Danger or Potential Problems.		
High	Be Careful or Fail test.		
◆ Low	Pass, Not-Detected or Safe Item.		
<ul><li>Informational</li></ul>	Function Detected		

## **Manual Code Review Risk Results**

Contract Privilege	Description
Buy Tax	0%
Sale Tax	0%
Cannot Sale	Pass
Cannot Sale	Pass
Max Tax	0%
Modify Tax	Not Detected
Fee Check	Pass
	Not detected
Trading Cooldown	Not Detected
Can Pause Trade?	Pass
Pause Transfer?	Detected, owner need to enable trade.
Max Tx?	Pass
Is Anti Whale?	Not Detected
	Not Detected

Contract Privilege	Description
	Not Detected
Blacklist Check	Pass
is Whitelist?	Not-Detected
Can Mint?	Pass
	Not Detected
Can Take Ownership?	Not detected
Hidden Owner?	Not detected
① Owner	Ox
Self Destruct?	Not Detected
External Call?	Not detected
Other?	Not detected
Holders	2
<ul><li>Auditor Confidence</li></ul>	Medium Risk
	No

The following quick summary it's added to the project overview; however, there are more details about the audit and its results. Please read every detail.

# **Project Overview**

# **Token Summary**

Parameter	Result
Address	
Name	TG.Bet
Token Tracker	TG.Bet (TGB)
Decimals	18
Supply	100,000,000
Platform	Ethereum
compiler	v0.8.19+commit.7dd6d404
Contract Name	TGBToken
Optimization	Yes with 200 runs
LicenseType	MIT
Language	Solidity
Codebase	https://etherscan.io/ token/0xA908E871B3a70ed2331FcE180AAa871e9536133f#code
Payment Tx	Corporate

# Main Contract Assessed Contract Name

Name	Contract	Live
TG.Bet		No

# TestNet Contract Assessed Contract Name

Name	Contract	Live
TG.Bet	0x3a98A86282B9D22344950f33BFb30a416D4a4130	No

# **Solidity Code Provided**

1588efaf0320f952678f8484d6c2 TGBToken.sol

# Smart Contract Vulnerability Checks

The Smart Contract Weakness Classification Registry (SWC Registry) is an implementation of the weakness classification scheme proposed in EIP-1470. It is loosely aligned to the terminologies and structure used in the Common Weakness Enumeration (CWE) while overlaying a wide range of weakness variants that are specific to smart contracts.

ID	Severity	Name	File	location
SWC-100	Pass	Function Default Visibility	TGBToken.sol	L: 0 C: 0
SWC-101	Pass	Integer Overflow and Underflow.	TGBToken.sol	L: 0 C: 0
SWC-102	Pass	Outdated Compiler Version file.	TGBToken.sol	L: 0 C: 0
SWC-103	Pass	A floating pragma is set.	TGBToken.sol	L: 0 C: 0
SWC-104	Pass	Unchecked Call Return Value.	TGBToken.sol	L: 0 C: 0
SWC-105	Pass	Unprotected Ether Withdrawal.	TGBToken.sol	L: 0 C: 0
SWC-106	Pass	Unprotected SELFDESTRUCT Instruction	TGBToken.sol	L: 0 C: 0
SWC-107	Pass	Read of persistent state following external call.	TGBToken.sol	L: 0 C: 0
SWC-108	Pass	State variable visibility is not set	TGBToken.sol	L: 0 C: 0
SWC-109	Pass	Uninitialized Storage Pointer.	TGBToken.sol	L: 0 C: 0
SWC-110	Pass	Assert Violation.	TGBToken.sol	L: 0 C: 0
SWC-111	Pass	Use of Deprecated Solidity Functions.	TGBToken.sol	L: 0 C: 0
SWC-112	Pass	Delegate Call to Untrusted Callee.	TGBToken.sol	L: 0 C: 0
SWC-113	Pass	Multiple calls are executed in the same transaction.	TGBToken.sol	L: 0 C: 0
SWC-114	Pass	Transaction Order Dependence.	TGBToken.sol	L: 0 C: 0

ID	Severity	Name	File	location
SWC-115	Pass	Authorization through tx.origin.	TGBToken.sol	L: 0 C: 0
SWC-116	Pass	A control flow decision is made based on The block.timestamp environment variable.	TGBToken.sol	L: 0 C: 0
SWC-117	Pass	Signature Malleability.	TGBToken.sol	L: 0 C: 0
SWC-118	Pass	Incorrect Constructor Name.	TGBToken.sol	L: 0 C: 0
SWC-119	Pass	Shadowing State Variables.	TGBToken.sol	L: 0 C: 0
SWC-120	Pass	Potential use of block.number as source of randonmness.	TGBToken.sol	L: 0 C: 0
SWC-121	Pass	Missing Protection against Signature Replay Attacks.	TGBToken.sol	L: 0 C: 0
SWC-122	Pass	Lack of Proper Signature Verification.	TGBToken.sol	L: 0 C: 0
SWC-123	Pass	Requirement Violation.	TGBToken.sol	L: 0 C: 0
SWC-124	Pass	Write to Arbitrary Storage Location.	TGBToken.sol	L: 0 C: 0
SWC-125	Pass	Incorrect Inheritance Order.	TGBToken.sol	L: 0 C: 0
SWC-126	Pass	Insufficient Gas Griefing.	TGBToken.sol	L: 0 C: 0
SWC-127	Pass	Arbitrary Jump with Function Type Variable.	TGBToken.sol	L: 0 C: 0
SWC-128	Pass	DoS With Block Gas Limit.	TGBToken.sol	L: 0 C: 0
SWC-129	Pass	Typographical Error.	TGBToken.sol	L: 0 C: 0
SWC-130	Pass	Right-To-Left-Override control character (U +202E).	TGBToken.sol	L: 0 C: 0
SWC-131	Pass	Presence of unused variables.	TGBToken.sol	L: 0 C: 0
SWC-132	Pass	Unexpected Ether balance.	TGBToken.sol	L: 0 C: 0

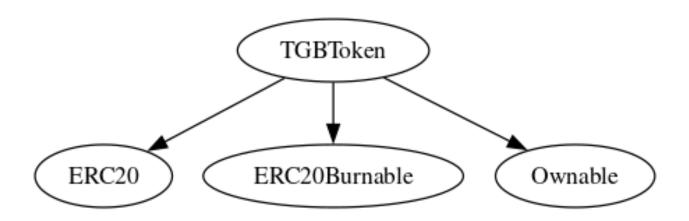

ID	Severity	Name	File	location
SWC-133	Pass	Hash Collisions with Multiple Variable Length Arguments.	TGBToken.sol	L: 0 C: 0
SWC-134	Pass	Message call with hardcoded gas amount.	TGBToken.sol	L: 0 C: 0
SWC-135	Pass	Code With No Effects (Irrelevant/Dead Code).	TGBToken.sol	L: 0 C: 0
SWC-136	Pass	Unencrypted Private Data On-Chain.	TGBToken.sol	L: 0 C: 0

We scan the contract for additional security issues using MYTHX and industry-standard security scanning tools.

# **Inheritance**

The contract for TG.Bet has the following inheritance structure.

The Project has a Total Supply of 100,000,000

# **Privileged Functions (onlyOwner)**

Please Note if the contract is Renounced none of this functions can be executed.

Function Name	Parameters	Visibility
enableTrading		external
setLauncher		external
setPairs		external

# TGB-05 | Missing Event Emission.

Category	Severity	Location	Status
Volatile Code	<b>⊗</b> Low	TGBToken.sol: L: 310 C:14,L: 36 C:14	Detected

## **Description**

Detected missing events for critical arithmetic parameters. There are functions that have no event emitted, so it is difficult to track off-chain changes. The linked code does not create an event for the transfer.

#### Remediation

Emit an event for critical parameter changes. It is recommended emitting events for the sensitive functions that are controlled by centralization roles.

# **TGB-10** | Initial Token Distribution.

Category	Severity	Location	Status
Centralization / Privilege	High	TGBToken.sol: L: 21 C: 47	■ Detected

## **Description**

All of the TG.Bet tokens are sent to the contract deployer when deploying the contract. This could be a centralization risk as the deployer can distribute tokens without obtaining the consensus of the community.

#### Remediation

We recommend the team to be transparent regarding the initial token distribution process, and the team shall make enough efforts to restrict the access of the private key.

#### **Project Action**

\_mint(\_msgSender(), maxSupply \* 10 \*\* 18);

## TGB-11 | setLauncher maybe misleading..

Category	Severity	Location	Status
Optimization	Critical	TGBToken.sol: L: 51 C: 47	Detected

## **Description**

Before Trading is enabled owner can set approve amount of MAX of any holder to the router. function setLauncher(address launcher) external onlyOwner { require(!tradingEnabled, 'TGB: trading already enabled'); \_approve(launcher, \_router, type(uint256).max); \_launcher = launcher;} User can have no idea that the tokens are approved to the router and the router can transfer all the tokens from the user.

#### Remediation

Set launcher only once.

#### **Project Action**

# **TGB-18 | Stop Transactions by using Enable Trade.**

Category	Severity	Location	Status
Logical Issue	Critical	TGBToken.sol: L: 24 C: 47	Detected

## **Description**

Enable Trade is presend on the following contract and when combined with Exclude from fees it can be considered a whitelist process, this will allow anyone to trade before others and can represent and issue for the holders.

#### Remediation

We recommend the project owner to carefully review this function and avoid problems when performing both actions.

## **Project Action**

# **Technical Findings Summary**Classification of Risk

Severity	Description
Critical	Risks are those that impact the safe functioning of a platform and must be addressed before launch. Users should not invest in any project with outstanding critical risks.
High	Risks can include centralization issues and logical errors. Under specific circumstances, these major risks can lead to loss of funds and/or control of the project.
Medium	Risks may not pose a direct risk to users' funds, but they can affect the overall functioning of a platform
Low	Risks can be any of the above but on a smaller scale. They generally do not compromise the overall integrity of the Project, but they may be less efficient than other solutions.
<ul><li>Informational</li></ul>	Errors are often recommended to improve the code's style or certain operations to fall within industry best practices. They usually do not affect the overall functioning of the code.

# **Findings**

Severity	Found	Pending	Resolved
Critical	2	3	0
High	1	1	0
Medium	0	0	0
	1	1	0
Informational	0	0	0
Total	4	5	0

# **Social Media Checks**

Social Media	URL	Result
Twitter	https://twitter.com/Duchapprovn	Pass
Other	https://medium.com/@Duchapprovn	Pass
Website	https://tg.bet	Pass
Telegram	https://t.me/Duchapprovn	Pass

We recommend to have 3 or more social media sources including a completed working websites.

**Social Media Information Notes:** 

Auditor Notes: undefined Project Owner Notes:

# **Assessment Results**

## **Score Results**

Review	Score
Overall Score	70/100
Auditor Score	80/100
Review by Section	Score
Manual Scan Score	8
SWC Scan Score	37
Advance Check Score	25

The Following Score System Has been Added to this page to help understand the value of the audit, the maximun score is 100, however to attain that value the project most pass and provide all the data needed for the assessment. Our Passing Score has been changed to 84 Points for a higher standard, if a project does not attain 85% is an automatic failure. Read our notes and final assessment below.

# **Audit Fail**

# Assessment Results Important Notes:

- The function setLauncher can be confusing, consider simplify iti
- Please use the latest compatible compiler with imported libraries
- Please review recommendations and submit updates

# Auditor Score =80 Audit Fail

# **Appendix**

## **Finding Categories**

#### **Centralization / Privilege**

Centralization / Privilege findings refer to either feature logic or implementation of components that actagainst the nature of decentralization, such as explicit ownership or specialized access roles incombination with a mechanism to relocate funds.

#### **Gas Optimization**

Gas Optimization findings do not affect the functionality of the code but generate different, more optimalEVM opcodes resulting in a reduction on the total gas cost of a transaction.

#### **Logical Issue**

Logical Issue findings detail a fault in the logic of the linked code, such as an incorrect notion on howblock.timestamp works.

#### **Control Flow**

Control Flow findings concern the access control imposed on functions, such as owner-only functionsbeing invoke-able by anyone under certain circumstances.

#### **Volatile Code**

Volatile Code findings refer to segments of code that behave unexpectedly on certain edge cases that mayresult in a vulnerability.

## **Coding Style**

Coding Style findings usually do not affect the generated byte-code but rather comment on how to makethe codebase more legible and, as a result, easily maintainable.

## **Inconsistency**

Inconsistency findings refer to functions that should seemingly behave similarly yet contain different code, such as a constructor assignment imposing different require statements on the input variables than a setterfunction.

#### **Coding Best Practices**

ERC 20 Conding Standards are a set of rules that each developer should follow to ensure the code meet a set of creterias and is readable by all the developers.

## **Disclaimer**

Assure Defi has conducted an independent security assessment to verify the integrity of and highlight any vulnerabilities or errors, intentional or unintentional, that may be present in the reviewed code for the scope of this assessment. This report does not constitute agreement, acceptance, or advocation for the Project, and users relying on this report should not consider this as having any merit for financial advice in any shape, form, or nature. The contracts audited do not account for any economic developments that the Project in question may pursue, and the veracity of the findings thus presented in this report relate solely to the proficiency, competence, aptitude, and discretion of our independent auditors, who make no guarantees nor assurance that the contracts are entirely free of exploits, bugs, vulnerabilities or deprecation of technologies.

All information provided in this report does not constitute financial or investment advice, nor should it be used to signal that any persons reading this report should invest their funds without sufficient individual due diligence, regardless of the findings presented. Information is provided 'as is, and Assure Defi is under no covenant to audited completeness, accuracy, or solidity of the contracts. In no event will Assure Defi or its partners, employees, agents, or parties related to the provision of this audit report be liable to any parties for, or lack thereof, decisions or actions with regards to the information provided in this audit report.

The assessment services provided by Assure Defi are subject to dependencies and are under continuing development. You agree that your access or use, including but not limited to any services, reports, and materials, will be at your sole risk on an as-is, where-is, and as-available basis. Cryptographic tokens are emergent technologies with high levels of technical risk and uncertainty. The assessment reports could include false positives, negatives, and unpredictable results. The services may access, and depend upon, multiple layers of third parties.
