

Security Assessment: World Compute Network TOKEN

November 1, 2024

• Audit Status: **Pass**

• Audit Edition: Advance

Risk Analysis

Classifications of Manual Risk Results

Classification	Description	
Critical	Danger or Potential Problems.	
High	Be Careful or Fail test.	
Medium	Pass, Not-Detected or Safe Item.	
Low	Function Detected	

Manual Code Review Risk Results

Contract Privilege	Description
Buy Tax	5%
Sale Tax	5%
Cannot Buy	Pass
Cannot Sale	Pass
Max Tax	15%
Modify Tax	Yes
Fee Check	Pass
	Not Detected
Trading Cooldown	Not Detected
Can Pause Trade?	Pass
Pause Transfer?	Not-Detected
Max Tx?	Pass
Is Anti Whale?	Detected
	Not-Detected

Contract Privilege	Description
Is Blacklist?	Not Detected
Blacklist Check	Pass
is Whitelist?	Detected
Can Mint?	Pass
	Not Detected
Can Take Ownership?	Not Detected
Hidden Owner?	Not-Detected
Owner	0xDEd50F59f3a34e1d026729956714D55a96685f45
Self Destruct?	Not Detected
External Call?	Not-Detected
Other?	Not Detected
Holders	169
Auditor Confidence	Medium
	No

The following quick summary it's added to the project overview; however, there are more details about the audit and its results. Please read every detail.

Project Overview

Token Summary

Parameter	Result	
Address	0xc3698f2F34e8396F7915C1b9FC10966525074291	
Name	World Compute Network	
Token Tracker	World Compute Network (WCN)	
Decimals	18	
Supply	100,000,000	
Platform	ETHEREUM	
compiler	v0.8.19+commit.7dd6d404	
Contract Name	WCNV2	
Optimization	Yes with 200 runs	
LicenseType	MIT	
Language	Solidity	
Codebase	https://etherscan.io/ address/0xc3698f2f34e8396f7915c1b9fc10966525074291#code	
Payment Tx	Corporate	

Main Contract Assessed Contract Name

Name	Contract	Live
World Compute Network 0xc3698f2F34e8396F7915C1b9FC10966525074291		Yes

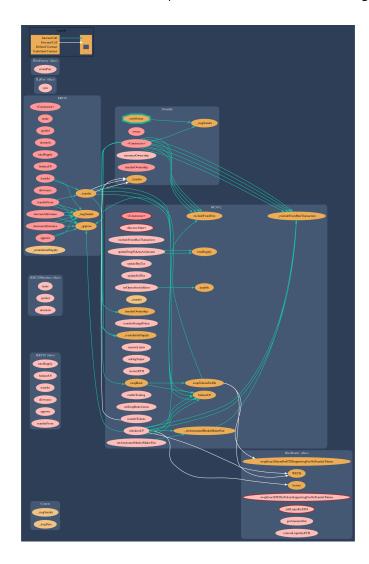

TestNet Contract was Not Assessed

Solidity Code Provided

SolID	File Sha-1	FileName
WCNV2	e94f45a2bf97192247aff1afe4823ba3eacb7874	WCNV2.sol
WCNV2		.sol

Call Graph

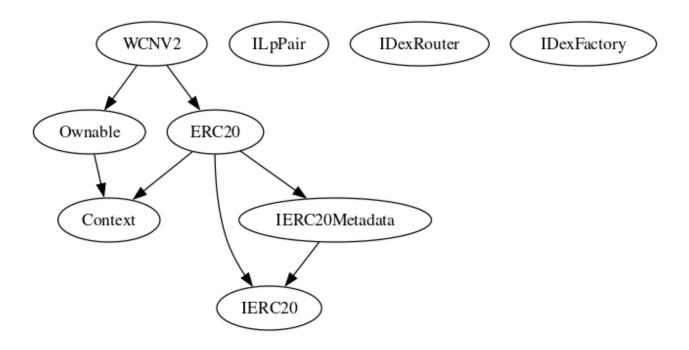

The contract for World Compute Network has the following call graph structure.

Inheritance

The contract for World Compute Network has the following inheritance structure.

The Project has a Total Supply of 100,000,000

Technical Findings Summary Classification of Risk

Severity	Description	
Critical	Risks are those that impact the safe functioning of a platform and must be addressed before launch. Users should not invest in any project with outstanding critical risks.	
High	Risks can include centralization issues and logical errors. Under specific circumstances, these major risks can lead to loss of funds and/or control of the project.	
Medium	Risks may not pose a direct risk to users' funds, but they can affect the overall functioning of a platform	
Low	Risks can be any of the above but on a smaller scale. They generally do not compromise the overall integrity of the Project, but they may be less efficient than other solutions.	
Informational	Errors are often recommended to improve the code's style or certain operations to fall within industry best practices. They usually do not affect the overall functioning of the code.	

Findings

Severity	Found	Pending	Resolved
Critical	0	0	0
High	0	0	0
Medium	0	0	0
O Low	0	0	0
Informational	0	0	0
Total	0	0	0

Social Media Checks

Social Media	URL	Result
Twitter	https://x.com/WorldComputeN	Pass
Other	https://linktr.ee/WorldComputeNet	Pass
Website	https://worldcompute.net Pass	
Telegram	https://t.me/WorldComputeNet	Pass

We recommend to have 3 or more social media sources including a completed working websites.

Assessment Results

Score Results

Review	Score
Overall Score	94/100
Auditor Score	85/100
Review by Section	Score
Manual Scan Score	17
Auto Scan Score	37
Advance Check Score	40

The Following Score System Has been Added to this page to help understand the value of the audit, the maximum score is 100, however to attain that value the project most pass and provide all the data needed for the assessment. Our Passing Score has been changed to 84 Points for a higher standard, if a project does not attain 85% is an automatic failure. Read our notes and final assessment below.

Audit Passed

Assessment Results Important Notes:

- Ownership and Control: Ensure the owner is trusted due to significant control over trading, fees, and liquidity. Ownership transfer and renunciation are available, but renunciation requires confirmation.
- Fee Structure: Buy and sell fees can be adjusted by the owner, though capped at 12% and 15% respectively. Monitor any changes to ensure they remain within specified limits.
- Trading and Liquidity: Trading can be enabled or paused by the owner, which could impact market activity. Liquidity can be initialized by the owner; ensure proper handling to avoid liquidity issues.
- Security Measures: Sniper protection is implemented, but relies on manual marking by the owner. Consider additional automated mechanisms for detecting malicious activity.
- Swap and Transaction Limits: Swap restrictions per block can be configured by the owner, impacting trading dynamics. Max buy/sell amounts and wallet limits are in place; ensure they are reasonable for market conditions.
- External Dependencies: Relies on external DEX contracts; ensure these are audited and secure. Verify the addresses of DEX router and factory for correctness.
- Code Quality: Functions like _transfer and swapBack are wellstructured but ensure thorough testing. Consider additional comments for clarity on complex logic.

Auditor Score =85 Audit Passed

Appendix

Finding Categories

Centralization / Privilege

Centralization / Privilege findings refer to either feature logic or implementation of components that actagainst the nature of decentralization, such as explicit ownership or specialized access roles incombination with a mechanism to relocate funds.

Gas Optimization

Gas Optimization findings do not affect the functionality of the code but generate different, more optimalEVM opcodes resulting in a reduction on the total gas cost of a transaction.

Logical Issue

Logical Issue findings detail a fault in the logic of the linked code, such as an incorrect notion on howblock.timestamp works.

Control Flow

Control Flow findings concern the access control imposed on functions, such as owner-only functionsbeing invoke-able by anyone under certain circumstances.

Volatile Code

Volatile Code findings refer to segments of code that behave unexpectedly on certain edge cases that mayresult in a vulnerability.

Coding Style

Coding Style findings usually do not affect the generated byte-code but rather comment on how to makethe codebase more legible and, as a result, easily maintainable.

Inconsistency

Inconsistency findings refer to functions that should seemingly behave similarly yet contain different code, such as a constructor assignment imposing different require statements on the input variables than a setterfunction.

Coding Best Practices

ERC 20 Conding Standards are a set of rules that each developer should follow to ensure the code meet a set of creterias and is readable by all the developers.

Disclaimer

Assure Defi has conducted an independent security assessment to verify the integrity of and highlight any vulnerabilities or errors, intentional or unintentional, that may be present in the reviewed code for the scope of this assessment. This report does not constitute agreement, acceptance, or advocation for the Project, and users relying on this report should not consider this as having any merit for financial advice in any shape, form, or nature. The contracts audited do not account for any economic developments that the Project in question may pursue, and the veracity of the findings thus presented in this report relate solely to the proficiency, competence, aptitude, and discretion of our independent auditors, who make no guarantees nor assurance that the contracts are entirely free of exploits, bugs, vulnerabilities or deprecation of technologies.

All information provided in this report does not constitute financial or investment advice, nor should it be used to signal that any persons reading this report should invest their funds without sufficient individual due diligence, regardless of the findings presented. Information is provided 'as is, and Assure Defi is under no covenant to audited completeness, accuracy, or solidity of the contracts. In no event will Assure Defi or its partners, employees, agents, or parties related to the provision of this audit report be liable to any parties for, or lack thereof, decisions or actions with regards to the information provided in this audit report.

The assessment services provided by Assure Defi are subject to dependencies and are under continuing development. You agree that your access or use, including but not limited to any services, reports, and materials, will be at your sole risk on an as-is, where-is, and as-available basis. Cryptographic tokens are emergent technologies with high levels of technical risk and uncertainty. The assessment reports could include false positives, negatives, and unpredictable results. The services may access, and depend upon, multiple layers of third parties.
