Holders	1
Auditor Confidence	Critical Risk
	No

The following quick summary it's added to the project overview; however, there are more details about the audit and its results. Please read every detail.

Project Overview

Token Summary

Parameter	Result
Address	0xae4065D87FCc9b7C99596C68C464415eEF87A48A
Name	VitalikMumDOGE
Token Tracker	VitalikMumDOGE (VMUMDOGE)
Decimals	18
Supply	70,000,000,000
Platform	METIS
compiler	v0.8.19+commit.7dd6d404
Contract Name	VitalikMumDOGE
Optimization	Yes with 200 runs
LicenseType	MIT
Language	Solidity
Codebase	https://explorer.metis.io/ address/0xae4065D87FCc9b7C99596C68C464415eEF87A48A/ contract/1088/code
Payment Tx	Corporate

Main Contract Assessed Contract Name

Name	Contract	Live
VitalikMumDOGE	0xae4065D87FCc9b7C99596C68C464415eEF87A48A	Yes

TestNet Contract Assessed Contract Name

Name	Contract	Live
VitalikMumDOGE	0xb985b10bAA93B066279e6d611A2E2e002c089FfC	Yes

VMUMDOGE		
VMUMDOGE	undefined	

Smart Contract Vulnerability Checks

The Smart Contract Weakness Classification Registry (SWC Registry) is an implementation of the weakness classification scheme proposed in EIP-1470. It is loosely aligned to the terminologies and structure used in the Common Weakness Enumeration (CWE) while overlaying a wide range of weakness variants that are specific to smart contracts.

ID	Severity	Name	File	location
SWC-100	Pass	Function Default Visibility	VMUMDOGE.sol	L: 0 C: 0
SWC-101	Pass	Integer Overflow and Underflow.	VMUMDOGE.sol	L: 0 C: 0
SWC-102	Pass	Outdated Compiler Version file.	VMUMDOGE.sol	L: 0 C: 0
SWC-103	Pass	A floating pragma is set.	VMUMDOGE.sol	L: 0 C: 0
SWC-104	Pass	Unchecked Call Return Value.	VMUMDOGE.sol	L: 0 C: 0
SWC-105	Pass	Unprotected Ether Withdrawal.	VMUMDOGE.sol	L: 0 C: 0
SWC-106	Pass	Unprotected SELFDESTRUCT Instruction	VMUMDOGE.sol	L: 0 C: 0
SWC-107	Pass	Read of persistent state following external call.	VMUMDOGE.sol	L: 0 C: 0
SWC-108	Pass	State variable visibility is not set	VMUMDOGE.sol	L: 0 C: 0
SWC-109	Pass	Uninitialized Storage Pointer.	VMUMDOGE.sol	L: 0 C: 0
SWC-110	Pass	Assert Violation.	VMUMDOGE.sol	L: 0 C: 0
SWC-111	Pass	Use of Deprecated Solidity Functions.	VMUMDOGE.sol	L: 0 C: 0
SWC-112	Pass	Delegate Call to Untrusted Callee.	VMUMDOGE.sol	L: 0 C: 0
SWC-113	Pass	Multiple calls are executed in the same transaction.	VMUMDOGE.sol	L: 0 C: 0
SWC-114	Pass	Transaction Order Dependence.	VMUMDOGE.sol	L: 0 C: 0

SWC-115 Pass Authorization through tx.origin. VMUMDOGE.sol SWC-116 Pass A control flow decision is made based on The block.timestamp environment variable. SWC-132 Pass Unexpected Ether balance. VMUMDOGE.sol	L: 0 C: 0

ID	Severity	Name	File	location
SWC-133	Pass	Hash Collisions with Multiple Variable Length Arguments.	VMUMDOGE.sol	L: 0 C: 0
SWC-134	Pass	Message call with hardcoded gas amount.	VMUMDOGE.sol	L: 0 C: 0
SWC-135	Pass	Code With No Effects (Irrelevant/Dead Code).	VMUMDOGE.sol	L: 0 C: 0
SWC-136	Pass	Unencrypted Private Data On-Chain.	VMUMDOGE.sol	L: 0 C: 0

We scan the contract for additional security issues using MYTHX and industry-standard security scanning tools.

Inheritance

The contract for VitalikMumDOGE has the following inheritance structure.

The Project has a Total Supply of 70,000,000,000

Privileged Functions (onlyOwner)

Please Note if the contract is Renounced none of this functions can be executed.

Function Name	Parameters	Visibility
renounceOwnership		Public
transferOwnership	address newOwner	Public
mint		External

VMUMDOGE-03 | Lack of Input Validation.

Category	Severity	Location	Status
Volatile Code	♦ Low	VMUMDOGE.sol: L: 2264, C: 14	Resolved

Description

The given input is missing the check for the non-zero address.

The given input is missing the check for the missing required function.

Remediation

We advise the client to add the check for the passed-in values to prevent unexpected errors as below:

```
require(receiver != address(0), "Receiver is the zero address"); ...
require(value X limitation, "Your not able to do this function");
```

We also recommend customer to review the following function that is missing a required validation. missing required function.

VMUMDOGE-05 | Missing Event Emission.

Category	Severity	Location	Status
Volatile Code	♦ Low	VMUMDOGE.sol: L: 2264, C: 14	Resolved

Description

Detected missing events for critical arithmetic parameters. There are functions that have no event emitted, so it is difficult to track off-chain changes. The linked code does not create an event for the transfer.

Remediation

Emit an event for critical parameter changes. It is recommended emitting events for the sensitive functions that are controlled by centralization roles.

VMUMDOGE-10 | Initial Token Distribution.

Category	Severity	Location	Status
Centralization / Privilege	High	VMUMDOGE.sol: L: 2261 C: 14	Resolved

Description

All of the VitalikMumDOGE tokens are sent to the contract deployer when deploying the contract. This could be a centralization risk as the deployer can distribute tokens without obtaining the consensus of the community.

Remediation

We recommend the team to be transparent regarding the initial token distribution process, and the team shall make enough efforts to restrict the access of the private key.

Project Action

emit Transfer(address(0), _msgSender(), _tTotal);

Technical Findings SummaryClassification of Risk

Severity	Description
Critical	Risks are those that impact the safe functioning of a platform and must be addressed before launch. Users should not invest in any project with outstanding critical risks.
High	Risks can include centralization issues and logical errors. Under specific circumstances, these major risks can lead to loss of funds and/or control of the project.
Medium	Risks may not pose a direct risk to users' funds, but they can affect the overall functioning of a platform
Low	Risks can be any of the above but on a smaller scale. They generally do not compromise the overall integrity of the Project, but they may be less efficient than other solutions.
Informational	Errors are often recommended to improve the code's style or certain operations to fall within industry best practices. They usually do not affect the overall functioning of the code.

Findings

Severity	Found	Pending	Resolved
Critical	0	0	0
High	1	1	0
Medium	0	0	0
	2	2	0
Informational	0	0	0
Total	3	0	4

Assessment Results

Score Results

Review	Score
Overall Score	88/100
Auditor Score	85/100
Review by Section	Score
Manual Scan Score	19
SWC Scan Score	37
Advance Check Score	32

The Following Score System Has been Added to this page to help understand the value of the audit, the maximun score is 100, however to attain that value the project most pass and provide all the data needed for the assessment. Our Passing Score has been changed to 84 Points for a higher standard, if a project does not attain 85% is an automatic failure. Read our notes and final assessment below.

Audit Passed

Assessment Results Important Notes:

• The Contract has been renounced.

Auditor Score =85 Audit Passed

Appendix

Finding Categories

Centralization / Privilege

Centralization / Privilege findings refer to either feature logic or implementation of components that actagainst the nature of decentralization, such as explicit ownership or specialized access roles incombination with a mechanism to relocate funds.

Gas Optimization

Gas Optimization findings do not affect the functionality of the code but generate different, more optimalEVM opcodes resulting in a reduction on the total gas cost of a transaction.

Logical Issue

Logical Issue findings detail a fault in the logic of the linked code, such as an incorrect notion on howblock.timestamp works.

Control Flow

Control Flow findings concern the access control imposed on functions, such as owner-only functionsbeing invoke-able by anyone under certain circumstances.

Volatile Code

Volatile Code findings refer to segments of code that behave unexpectedly on certain edge cases that mayresult in a vulnerability.

Coding Style

Coding Style findings usually do not affect the generated byte-code but rather comment on how to makethe codebase more legible and, as a result, easily maintainable.

Inconsistency

Inconsistency findings refer to functions that should seemingly behave similarly yet contain different code, such as a constructor assignment imposing different require statements on the input variables than a setterfunction.

Coding Best Practices

ERC 20 Conding Standards are a set of rules that each developer should follow to ensure the code meet a set of creterias and is readable by all the developers.

Disclaimer

Assure Defi has conducted an independent security assessment to verify the integrity of and highlight any vulnerabilities or errors, intentional or unintentional, that may be present in the reviewed code for the scope of this assessment. This report does not constitute agreement, acceptance, or advocation for the Project, and users relying on this report should not consider this as having any merit for financial advice in any shape, form, or nature. The contracts audited do not account for any economic developments that the Project in question may pursue, and the veracity of the findings thus presented in this report relate solely to the proficiency, competence, aptitude, and discretion of our independent auditors, who make no guarantees nor assurance that the contracts are entirely free of exploits, bugs, vulnerabilities or deprecation of technologies.

All information provided in this report does not constitute financial or investment advice, nor should it be used to signal that any persons reading this report should invest their funds without sufficient individual due diligence, regardless of the findings presented. Information is provided 'as is, and Assure Defi is under no covenant to audited completeness, accuracy, or solidity of the contracts. In no event will Assure Defi or its partners, employees, agents, or parties related to the provision of this audit report be liable to any parties for, or lack thereof, decisions or actions with regards to the information provided in this audit report.

The assessment services provided by Assure Defi are subject to dependencies and are under continuing development. You agree that your access or use, including but not limited to any services, reports, and materials, will be at your sole risk on an as-is, where-is, and as-available basis. Cryptographic tokens are emergent technologies with high levels of technical risk and uncertainty. The assessment reports could include false positives, negatives, and unpredictable results. The services may access, and depend upon, multiple layers of third parties.
